

ABDUL HAMEED S M

Software Developer · React · Node.js · Laravel · Python · MySQL

ah303130@gmail.com | +91 9994377199 | abdulhameedm.vercel.app | linkedin.com/in/abdulhameed06 | github.com/abduldev-cloud

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer (MCA 2026) with 1 year of production experience building web applications serving 500+ daily active users. Proficient in React, Node.js, Laravel, Python/FastAPI, and MySQL — with hands-on delivery across REST API design, multi-tenant SaaS platforms, and CI/CD workflows. Open to full-stack roles and immediate relocation.

EXPERIENCE

Software Developer Intern — *Dynamic Scientific & Research Center*

Mar 2025 – Dec 2025

- Built and owned an academic data platform from scratch — now serving 500+ daily active users with zero reported downtime across 9 months.
- Architected 5+ Laravel Nova admin interfaces, cutting staff data-entry time by ~40% through automated validation and streamlined workflows.
- Designed RESTful APIs across 3 institutional modules, reducing manual data reconciliation from days to minutes.
- Introduced Git-based CI workflow (GitHub Actions), shifting deployments from ad-hoc to structured weekly releases; improved team velocity and reduced deployment errors.
- Developed FIP Portal (FXEC Information Portal) — a permission-based institutional ERP serving 800+ daily active users; enforced a dual higher-official approval workflow before any academic record is committed, eliminating data integrity and misinformation risks across all modules.
- Built 5+ Laravel Nova admin interfaces with role-based access control (RBAC) across Faculty Action Plans, Achievements, Research, Competency, and Placement modules using PHP/Laravel; optimised SQL queries for fast data retrieval at scale and automated input validation to reduce manual errors by ~40%.
- Contributed to CAMS (Campus Academic Management System) — the institution's core platform serving 1,000+ daily active users; built Angular frontend components and Node.js/Express RESTful APIs covering student course selection, OD/leave, exam timetables, fee payments, biometrics, feedback evaluation, and lab management.
- Implemented role-specific dashboards for students, faculty, higher officials, and admins with permission-scoped access; secured APIs with JWT authentication and bcrypt password hashing; validated all endpoints via Postman before each release within an Agile Scrum team.

Java Development Intern — *Iconic Software Solution*

Jan 2023

- Re-engineered a Java Applet GUI simulation using object-oriented programming (OOP) principles — achieved 25% improvement in animation performance via optimised rendering loops, event-driven architecture, and efficient memory management.
- Delivered a responsive real-time motion interface with clean, well-documented code; accepted with zero revision requests, demonstrating strong attention to UI/UX quality and software delivery standards.

PROJECTS

FIP Portal | Internship Project | *Dynamic Scientific & Research Center*

Stack: PHP · Laravel · Laravel Nova · MySQL · REST API · RBAC · Git · GitHub Actions

- Built and Maintain a multi-module institutional ERP Software serving 800+ daily active users with zero reported downtime; architected a dual higher-official approval workflow ensuring data integrity and preventing misinformation across all academic records.
- Designed 5+ Laravel Nova admin interfaces with role-based access control (RBAC) across Faculty Action Plans, Achievements, and Research, Competency, Placement, and Student Accomplishment modules; implemented advanced SQL filtering for high-speed data retrieval.
- Engineered RESTful APIs with automated input validation and permission-scoped access control; applied schema design best practices and PSR coding standards within an Agile team; integrated Git-based CI/CD for structured weekly releases.

CAMS | Internship Project | *Dynamic Scientific & Research Center*

Stack: Angular · Node.js · Express.js · MySQL · REST API · JWT Auth · bcrypt · Postman · MVC · Agile/Scrum

- Maintaining the institution's core campus management platform (1,000+ daily active users) covering student course selection, OD/leave applications, exam timetables, fee payments, biometrics, feedback evaluation, skills tracking, and lab management — the largest user-scale system in the project portfolio.
- Developed Angular frontend components and role-specific dashboards for students, faculty, higher officials, and admins; implemented JWT authentication, bcrypt hashing, and permission-scoped API routes with Node.js/Express.
- Validated all RESTful API endpoints via Postman before release; followed MVC architecture and PSR standards; collaborated in Agile Scrum sprints with structured code reviews and task tracking.

VantanceCA — CA Exam Preparation System | Final Year PG Project

Mar 2026

Stack: React · Python · FastAPI · MySQL

- Architected a full-stack CA exam prep platform with an AI Grading Engine achieving 90%+ alignment to official marking schemes with real-time learner feedback.

- ▶ Applied Agile/Scrum methodology with iterative sprint planning, breaking the platform into modular deliverables; integrated TypeScript for type-safe frontend development and unit testing for grading engine reliability.
- ▶ Built teacher dashboard (Recharts) for real-time insights into student gaps; engineered FastAPI pipeline for PDF extraction and study material sync.
- ▶ Multi-tenant schema with strict RBAC supporting multiple institutes, teachers, and students.

SavePlate — Food Rescue Network | Inter-Dept. Hackathon

Nov 2025

Stack: React · Node.js · Express · MySQL

- ▶ Full-stack food rescue donation platform delivered from zero to production in under 72 hours using Agile rapid-development principles; implemented JWT + bcrypt authentication with 3 user roles (donor, recipient, admin) and permission-scoped RESTful API routes.
- ▶ Built real-time admin dashboard (React, Node.js/Express) tracking 100+ test transactions with <200ms average API response time;
- ▶ Deployed on Vercel with CI/CD pipeline via GitHub Actions.

Live: <https://saveplates.vercel.app/>

TaskFlow — Team Task Management SaaS | Internship Project

Jun 2025

Stack: Angular · Node.js · MySQL · MVC

- ▶ Built a multi-tenant SaaS task management system with Angular frontend and Node.js/Express backend; Admin and User dashboards with task assignment, deadline tracking, approval workflows, and real-time status updates for a 10-person team pilot.
- ▶ Applied MVC architecture, PSR coding standards, and modular REST API design;
- ▶ Reduced new contributor onboarding time to under 1 day; deployed on Vercel with structured CI/CD workflow.

Live: <https://tsflow.vercel.app/>

E-Tronics — Full-Stack E-Commerce Platform | Final Year UG Project

Dec 2023 – Mar 2024

Stack: React · Laravel · MySQL

- ▶ Production-grade electronics store with secure payment gateway, product catalogue, and full admin module;
- ▶ Implemented responsive UI with React, Laravel backend APIs, and MySQL schema — UX optimised to under 4 clicks from search to checkout.

EDUCATION

Master of Computer Applications (MCA)

2024 – 2026

Francis Xavier Engineering College, Tirunelveli

B.Sc. Computer Science

2021 – 2024

Sadakathullah Appa College, Tirunelveli

TECHNICAL SKILLS

Frontend	React.js, Angular, HTML5, CSS3
Backend	Node.js, Express.js, Python, FastAPI, PHP (Laravel, Laravel Nova), REST API Design
Databases	MySQL, SQL (schema design, query optimisation)
Languages	JavaScript (ES6+), PHP, Python, Java, C, Typescript
Tools	Git, GitHub, Vercel, JWT Auth, bcrypt, MVC Architecture, CI/CD (GitHub Actions), Unit Testing, Docker
